

Optimal ICT protection

From consultancy to management
via development and implementation

Contents

This brochure gives you detailed information on the way in which Telenet can protect your company's ICT network.

Experience, expertise and tailored solutions	04
Comprehensive service, from audit to support	06
High quality security tools that have been tested and certified	08
Integrated global approach	10
A professional partner	11

Don't leave anything to chance

Your information and ICT network require the highest level of protection. Since the reliability of any security system is determined by its weakest link, Telenet offers you a comprehensive and integrated approach.

Solutions

- A comprehensive service, from consultancy to management
- Security architecture
- Next-generation firewall
- User & device identification
- Web, mail, data & appliance security
- Perimeter security
- End-point security
- Security Information Event Management (SIEM)
- Assessments & technical audits

Advantages

- Technical expertise underpinned by experience and knowledge
- International certification
- Ongoing tracking of latest technological developments
- Theoretical and practical training

Experience, expertise and tailored solutions

Our experienced C-CURE consultants and engineers can draw on their extensive technical expertise to provide you with a solution tailored to your needs.

Method

Optimal protection requires knowledge and control of each component of a network. We therefore always begin by comprehensively mapping your infrastructure. We then develop security architecture using the most appropriate components.

All your company's servers are placed within a security perimeter. Communication with the servers is then fully controlled by means of demilitarised zones (DMZs).

Experience and knowledge

The introduction or upgrading of security architecture can prove to be technically complex. It requires extensive knowledge and experience of products, technologies and business processes.

Our specialists are fully familiar with both offensive and defensive technologies. Besides their considerable technical expertise, they also have sound practical experience of the different areas of security.

Information Security Roadmap

Based on our tried and tested offering, we can develop a comprehensive corporate information security roadmap.

- Availability & Performance
- End-Point Protection
- User & Device Identification
- Data & application Protection
- Active Internal Prevention & Detection
- Boundary Protection

Monitoring & Reporting

Configuration & Change

Vulnerability Management

Forensics

A comprehensive service, from audit to support

We are able to provide you with comprehensive service,
from assessment to reporting via implementation and supervision.

Audit services

An in-depth audit of your current security situation will reveal any sensitive spots and form the basis of a roadmap. We apply the strictest security standards.

- Audit of your current security situation
- Analysis of existing technology
- Identification of weak points
- Making your staff aware of weak points

Consulting Services

We provide you with sound advice concerning the use of the technology, its implementation and its integration into your security environment.

- Complex security applications
- Complex tasks linked to the integration of security
- Optimisation and alignment of your security environment
- Development of a technical roadmap
- Assistance in designing security architecture

Managed services

We can manage your security perimeter and analyse with you any new threats to your network as a first step towards developing a security system for your company.

- Supervision of your security infrastructure
- All the administration services required to make your network secure
- Analysis of solutions to make your network secure

Support services

- **The Licence Desk** ensures efficient management of licences for our security products. We keep track of all the products and licences managed by Telenet and identify potential upgrades once a year.
- **The Service Desk** reports incidents and problems and has them rapidly resolved by certified security experts.

High-quality security tools that have been tested and certified

Our approach is very different from the one used by security product resellers. It is highly architecture-oriented and not based on one-off technical solutions that are at best only stopgap measures.

Choice of products

First of all, we focus on our customers' needs and the frameworks underlying them before choosing suitable products. The next phase, an important one, involves integrating the new technology into the customer's security infrastructure.

Certification

The security products we work with undergo thorough analysis and comparative performance tests. We always aim to obtain the highest possible certification. To this end, we have signed long-term partnership agreements with trustworthy partners.

Training

We provide our customers with training tailored to their specific security requirements at our dedicated training centre and with the support of our security partners.

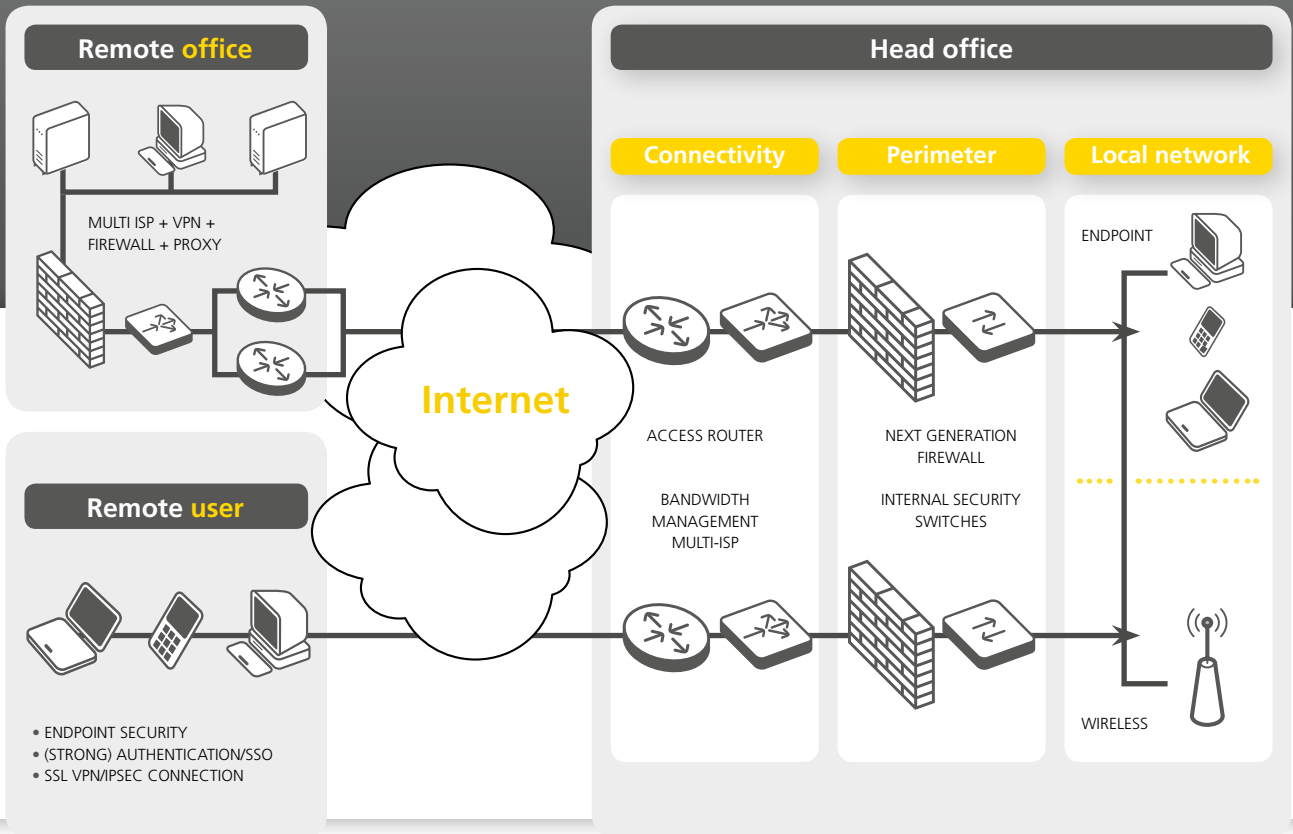

Partners

Integrated global approach

In order to ensure that your ICT environment is fully secure, you need more than just a firewall and antivirus software. Telenet will provide you with a comprehensive package that is fully hacker-proof.

Telenet Solutions Division

A professional partner

Telenet's and C-CURE's security experts are part of the Telenet Solutions Division, a unit dedicated to businesses (B-to-B) and government agencies.

Telenet Solutions Division

Telenet Solutions Division develops mobile work, network management, cloud computing and videoconference solutions for businesses. Each of our activities is resolutely service-oriented and service is very reliant on the human element. Our engineers excel thanks to their technical knowledge, practical experience and a personal approach.

Advantages

- A seasoned player recommended by customers in all segments of the market
- Coverage of the whole of Belgium and Luxembourg via its own network
- A proactive and customer-oriented approach dedicated to servicing businesses 24 hours a day, 7 days a week
- Proven reliability and excellent service level agreements (SLAs)
- Ongoing quality control
- True network redundancy
