

Secured Internet Gateway

Optimum security for your network and data

You have Internet connections that are reliable, ultrafast and entirely separate from the web traffic generated by private users. Internet for business use has to have maximum security. That is precisely what you get with Secured Internet Gateway, a comprehensive, application-oriented solution developed by our C-CURE experts that protects your network and data from intrusions, thefts, viruses and malicious software.

In a nutshell

- › Sophisticated, application-oriented firewall: identifies, blocks or authorises applications and deals with any threats to them
- › Security based on the latest and strictest standards
- › Implementation and management by Telenet
- › Real-time protection: all threats dealt with directly
- › Integral redundancy for optimum tranquillity
- › Possibility to grant remote workers access to the corporate network
- › Appropriate for iFiber, Corporate Fibernet and iVDSL

The advantages for you

- › Permanent and maximum protection of your network and data
- › Integral management by Telenet's security consultants and engineers
- › Minimum initial outlay: no need for equipment or IT knowledge
- › Flexible: customised, extendible, easily adaptable

BREAKOUT VERSION AVAILABLE FOR VPN

VPN: Secured Internet Breakout

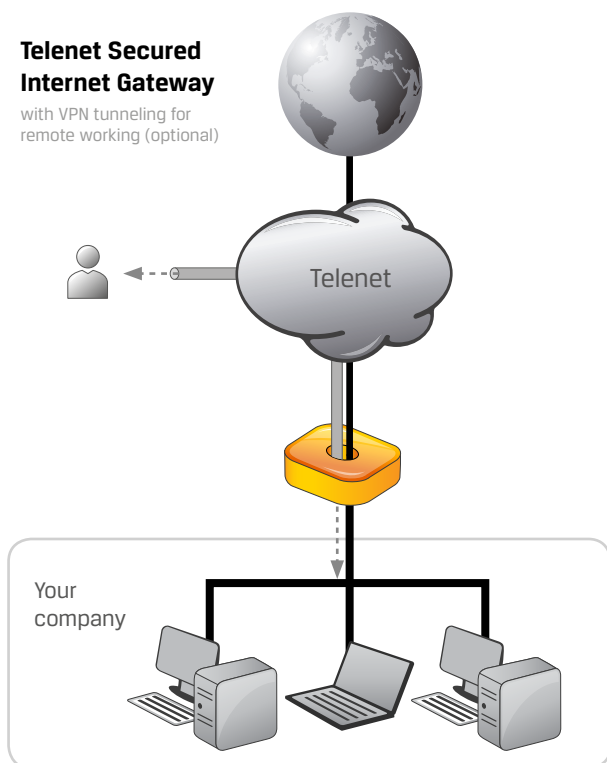

This comprehensive solution offers you exactly the same characteristics and advantages as Secured Internet Gateway but has been specially designed as an Internet routing ("breakout") solution for companies possessing a VPN.
